Hubs : Aluminium

Spokes: 20 and 24 Pillar

Price: 239.99 Euros

Weight: 730g and 930g, 1660g for both

Our feedback:

Alex: even though they're not very rigid in general, they fascinate me. These wheels are very expressive, playful, just happy. Their liveliness allows them to be very accessible and to provide the rider with a good feeling even without riding fast. Riding with the RCZ even gets fun! Priority to light riders, heavyweights may damage them.

Richard: Without any doubt, these are the wheels with the best value for money . I'm very surprised by their ease to climb up the hill despite my weight. I didn't think that would be the case. They are rather mountain adapted , easy and pleasant to use. At this price, one is likely not to trust them : impossible not to put their reliability into doubt. We are so formatted on other price categories, that it seems too good to be true. So, here is my tip: if you can't purchase anything more expensive, than go for it. Let spokes tension get tested by a specialist and keep an eye on them quite regularly. You'll then avoid eventual problems and will have made the deal of the century. Even if I've liked them, I think they're more adapted for people weighting maximum 80 kg.
